CAREER OVERVIEW

Throughout the 1990s Professor Hickie worked extensively with Dr Margaret Tobin and other colleagues in South-Eastern Sydney to develop sophisticated academic-service partnerships that were designed to increase access to better quality mental health care. From 1997 to 2003, Professor Hickie was Professor of Community Psychiatry at the University of New South Wales. Throughout this period, he actively promoted community understanding of depression and related mental health issues, developing innovation in primary-care based education, training, evaluation and service partnerships, and supporting mental health research and service development that was responsive to community needs.

Professor Hickie and colleagues established 'SPHERE: A National Depression Project'. Since 1997, over 8,000 general practitioners throughout Australia have participated in this major educational, training and service evaluation program (with over 40% of participants working outside the capital cities). In 1999, the SPHERE Project was awarded a Gold THEMHS Award for education and training in mental health in Australasia. This work now continues through an academic-commercial partnership (between the BMRI and Educational Health Solutions) based at the BMRI in Sydney. Currently, education and training modules in general practice education, related to psychological skills, bipolar disorder, early psychosis and development of collaborative care models, are in operation throughout Australia.

From 2000 to 2003, Professor Hickie was the inaugural CEO of *beyondblue: the national depression initiative*, and from 2003 to 2006, he was the clinical advisor to this national organisation. In his role at *beyondblue*, he established the major awareness, prevention and early intervention programs, infrastructure, consumer and carer participation organisations, national community and primary care partnerships, large and small grants mechanisms and evaluative processes, which have underpinned the internationally-recognised work of the organisation. Each of these has led to a major and sustained national development as evidenced by: 'blueVoices', the new national consumer and carer organisation; a national secondary schools-based depression prevention and early intervention program of research for young persons; a national peri-natal depression early identification and early intervention program; partnerships with the insurance industry to reduce discrimination in life insurance and disability insurance; a major website associated with very high levels of utilisation; and, a major and ongoing program of community awareness and destigmatisation through a combination of mass media, expert commentary and local community education and training.

The impact of *beyondblue* on community attitudes has been assessed systematically by both internal and external agencies. It demonstrates that a well-coordinated, community-led and clinically-informed health agency can have a major positive impact within short time-frames. The considerable contribution and ongoing role of *beyondblue* in the Australian mental health field was acknowledged by the Australian government most obviously in terms of the refunding of *beyondblue* for a further five years and an increase in the allocated budget from \$17.5 to \$30 million. Following his role in the establishment of the large population-based depression awareness and illness prevention program, *beyondblue*, Professor Hickie was invited by Dr Norman Sartorius to become the Chief Operating Officer of a new international consortium (SEBoD), to lead a similar style of work in the Asia-Pacific region.

Professor Ian Hickie was appointed in 2003 as the inaugural Executive Director of the Brain & Mind Research Institute (BMRI) at The University of Sydney. The BMRI has recently received extensive support from the Australian government (now over \$15 million) and the NSW Government (\$22 million) to develop research, training and clinical services infrastructure devoted to the reduction of the national health burden due to psychiatric and neurological

disorders, particularly amongst young persons. This forms part of the \$50 million redevelopment program being funded by The University of Sydney and governmental and private partners. It brings together the expertise of 62 NHMRC and ARC funded clinical and basic neuroscience research programs.

Professor Hickie is a member of the current NHMRC Program grant (\$7.4m, 2005-09) and the NHMRC Clinical Centre of Research Excellence (\$2m, 2005-09); both led by Professor McGorry and which focus on the evaluation of clinical interventions in order to reduce the health burden among young persons with severe mental illness. The BMRI serves as the Sydney base for these major national research, education and training programs. Additionally, these groups have been selected to lead the new National Youth Mental Health Foundation, a \$54 million Australian Government Health Services Initiative. Professor Hickie's roles focus particularly on his clinical expertise with severe mood disorders and his extensive background in the development of primary-care based early intervention and other mental health service initiatives.

While a Board Member of the Mental Health Council of Australia, Professor Hickie was at the forefront of national movements to assess consumers' and carers' experiences of mental health services. These activities have resulted in key publications such as the 2002 report "Out of Hospital, Out of Mind!", the 2004 pre-election policy document "Investing in Australia's Future" and the 2005 report in partnership with the Human Rights and Equal Opportunities Commission "Not for Service". These reports have assisted to focus national attention on the need to reshape mental health services to focus on the needs of youth and commit to key social, educational and economic outcomes.

In 2005, Professor Hickie was awarded the Margaret Tobin Award of the Royal Australian and New Zealand College of Psychiatrists, which recognises the Fellow of the College who has made the most significant contribution to Administrative Psychiatry in Australia or New Zealand during the last five years. In 2006, Professor Hickie received the Australian Honours Award of Member (AM) in the General Division for services to medicine in the development of key national mental health initiatives and general practice services in both the public and non-government sectors.

In 2007, Professor Hickie was appointed to the Prime Minister's Australian National Council on Drugs and has led the BMRI as a founding member of the new National Youth Mental Health Foundation ('headspace'). In 2007, Professor Hickie was also elected to the Australian Academy of Social Sciences.

From 2008-13, Professor Hickie will be one of the first new NHMRC 2008 Australian Fellows; recognising excellence in Australian Medical Research. His work will focus on expansion of population-based mental health research and development of international mental health strategies.

In May 2009, Professor Hickie became a member of the Common Approach to Assessment Referral and System Taskforce convened by the Minister for Families, Housing, Community Services and Indigenous Affairs and Professor Fiona Stanley AC Chair of ARACY.
